Can your users tolerate an occasional gargly call... even if a customer is on the line?

Y

N

How many users are on-site?

<30

30+

Option 1: Try the low cost method - Sending your VoIP over your Internet connection. If that doesn't work, skip to the next question (below).

Is your Internet Connection under contract?

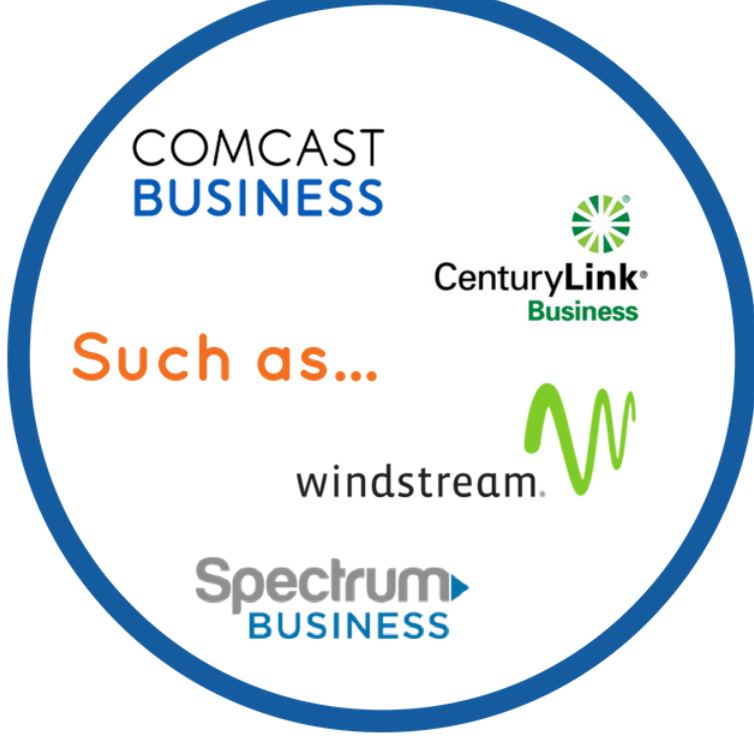

Y

N

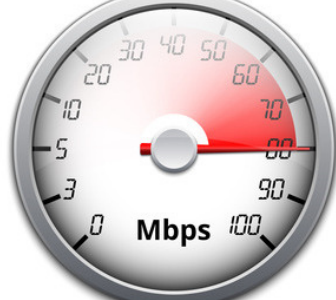

Is your ISP one of the big nat'l players?

Y

N

Option 2: Use a VoIP provider that has a Network-to-Network Interface (NNI) with your ISP. You can also try **Option 3** (below).

Is your Internet a "D.I.A." connection?

Y

N

or

Option 3: Install a cloud-enabled SD-WAN solution.

Option 4: Install **Option 3**, and add a second Internet connection to load-balance with your current ISP.
